

Managed Networking Service

PlanNet21's Managed Networking Service, powered by Conscia is a comprehensive solution for deploying, monitoring, and managing both wired and wireless networks across your organization.

Beyond delivering essential network functionality, the service emphasizes security, performance, and scalability, providing businesses with reliable connectivity and full visibility across all devices and users.

With the PlanNet21 Managed Networking Service, your business benefits from seamless network operations across offices, retail locations, warehouses, and other facilities. The service ensures stable, secure, and high-performing connections for all users and devices within your premises. The service streamlines network setup, upgrades, and expansions, enabling effortless management of switches, access points, and overall infrastructure while maintaining consistent quality and reliability for every connection.

Why buy PlanNet21 Managed Networking Service

- Comprehensive network management delivered by certified experts with deep Cisco knowledge.
- 24/7 monitoring, regular updates, and proactive issue resolution to prevent disruptions before they occur.
- A single platform (CNS) for complete visibility, incident handling, and performance tracking.
- Acting as an extension of the customer's IT team, providing strategic support and enabling focus on core business objectives.
- Robust security measures and industry compliance expertise to protect critical data and ensure peace of mind.
